

# 1, Days on bottled water

Duke Energy's neighbors have been living on bottled water for 1,000 days - (or nearly 3 years!)

For 1,000 days they have carried cases after case of water into their homes and tried to carry on with life while knowing the water out of their tap may be harmful to them and their families.

However, in that time DEQ has still not ordered a clean-up of the coal ash that is affecting groundwater wells, nor has it set groundwater standards that protect the health of all well water users.

Stand with community members as they say enough is enough!

After nearly 3 years of communities living on bottled water it is time for DEQ to take action.

- Order Duke to clean up its coal ash and safely recycle it or dispose of it safely above ground on Duke's property.
- Don't let poisoned wells from corporate polluters put more people at risk. Set groundwater standards that are protective of public health.
